

# WELL ABANDONMENT

## Exceptional Capability

Licensed in most states and operating one of the largest and most reliable fleets of multi-capable well abandonment equipment in the US, WDC has the resources required for the rapid response necessary to keep fast track projects on schedule.

Regardless of your well destruction requirements, WDC offers 56 years of experience and state-of-the-art equipment efficient abandonment of virtually every size and shape of monitoring and water production well by employing innovative techniques designed for cost effective compliance with all local, state or federal well destruction requirements.

## New Rig Advantage

WDC recognized long ago that clients throughout the industry were tired of old, dangerous and poorly maintained equipment being mobilized to their job sites. Beginning in 2000, we systematically began to upgrade our large fleet of aging rigs and support equipment. Virtually every piece of equipment was replaced with state of the art drilling rigs, portable mud/shaker pits, support trucks, forklifts and down-hole tooling. We are able to focus our efforts and resources on efficiently completing projects instead of scrambling to repair equipment that always seemed to breakdown during a crucial phase of a high profile project.

## Safety & Training

Our field service crews are fully trained to comply with any site specific requirements including:

- OSHA 40 Hour HAZWOPER
- 8 hour OSHA Supervisor Training
- OSHA Forklift Training
- MSHA Training
- Most Oil Company Specific Training
- Drug Free Workplace and Random Drug Testing Program
- Driver Safety Program
- WDC S.T.O.P. Card Onsite Safety Program

## Minimized Risk

WDC Exploration & Wells offers added value to our customers by offering:

- High Bonding Capacity
- Worker's Compensation Insurance
- Customer Additionally Insured Program
- High Pollution and Excess Liability Insurance Limits
- As an added value to large project customers offering negotiated contracts, we will offer an equipment performance guarantee that will credit our customers for oversight time during breakdown periods if breakdown periods exceed 10% of the total project duration.
